

The Geometry Codex

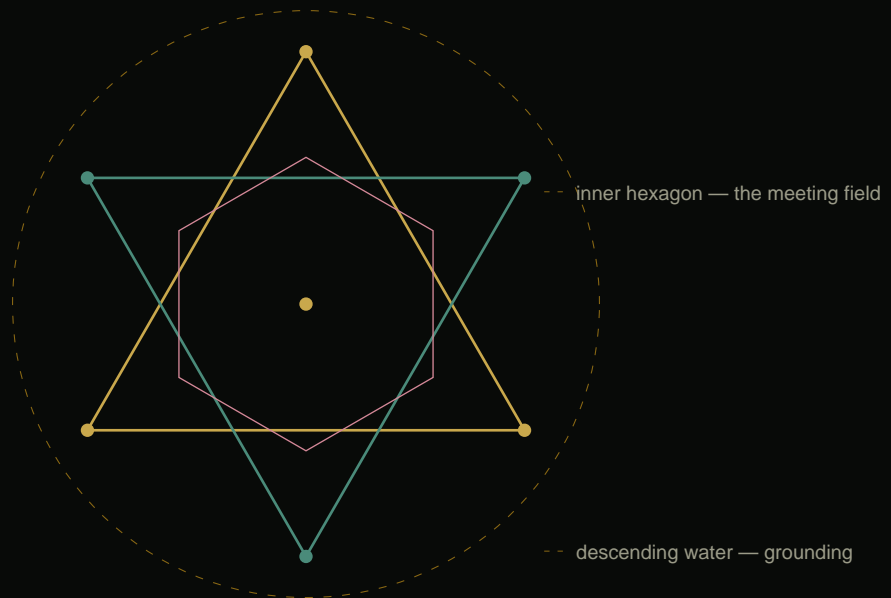

The sacred construction & meaning of the mark

The Star Tetrahedron

Two triangles in perfect opposition — spirit descending, matter ascending, meeting as one.

S
--

-- ascending fire — aspiration

M
--

MEANING

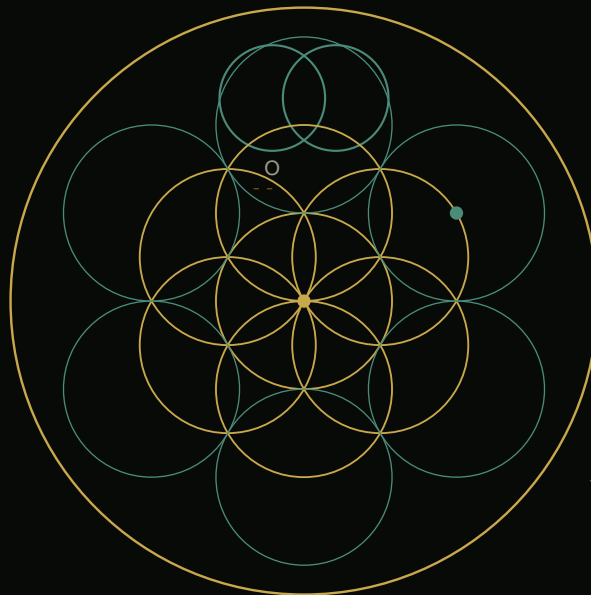

Known as the Merkaba — the union of opposites held in still balance.
Upward and downward triangles: intention and embodiment, self and world.
Where they overlap, a hexagon is born — harmony is the child of tension.

The Flower of Life

From one circle, all circles — each new centre born where two arcs cross.

-- vesica piscis — the first relation

-- seed of life — first six petals

-- second ring — growth by relation

MEANING -- the bounding circle — wholeness

The oldest pattern of creation — found at Abydos, in temples and manuscripts.

Every circle shares its centre with another's edge: nothing exists alone.

In the mark it is the heart — life, interconnection, the source point of design.

The Unified Mark

Vessel, balance and life — three orders of geometry in one proportioned signature.

-- star tetrahedron · 0.86 R — the balance

-- outer ring · 1.12 R — the field

-- hexagon · R — the vessel

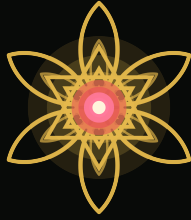

-- flower of life · 0.30 R — the heart

MEANING

Read from the outside in: field, vessel, balance, heart.

Structure protects energy; energy animates structure — design as living system.

This is the signature of GM Collective Labs: engineering precision, sacred intent.

From hand to geometry

Every GM Collective Labs identity begins as a hand-drawn sketch,
is reconstructed with compass logic, and is delivered with its own Codex —
so the people who carry the mark also carry its meaning.

A personalised Geometry Codex is included in every Identity Ecosystem engagement.
